Aim:-

Create a snapshot of a VM and test it by loading the previous version / cloned VM

Procedure

- (1) Goto & install Oracle VM Virtual Box
- (2) Click Machine from Oracle VM Virtual Box Manager
- (3) Select clone in the machine option
- (4) Then virtual machine clone will be opened
→ ask about the new machine name & Both & Additional options: disk names hardware
- (5) click next
- (6) Now select clone type
⇒ Full - Exact copy of original VM is created
⇒ Linked - a new VM created
- (7) After that, if we select this clone, then a new snapshot will be created on the original VM as the part of cloning process
- (8) Now click Finish
- (9) Cloning of a VM to create snapshot is finally created

Results:-

Hence creation of snapshot of a VM and test it by loading the previous version / cloned VM is successfully performed
